Nebido 250mg (4ml) This can hurt but its usually due to the volume of product injected into a small area. I occasionally inject it either in both buttock cheeks especially in very slim patients, or change directions still with the same entry point to spread things out a little. This comes in a vial. Nebido goes in the butt. Sustanon can too but can also be injected into the thigh (which may be a shorter needle, depending how much fat is on the thighs) Nebido is thicker so a wider needle might be used for it. Warming the ampoule beforehand can help it go in easier.

Sustenon is just weird IMO: 4 esters all in one shot. Steroid calc is super cool. You're blood levels will clearly be super stable (at least in theory) with the undecanoate ester only. Well done BTW reproducing Sust using the calculator.

Sustanon 250 is a blend of four testosterone esters manufactured by Oragon Pharmaceuticals. Along with Nebido and Testogel, Sustanon is one of the most commonly prescribed drugs for Hormone replacement therapy in men suffering from Hypogonadism. going here

Nebido contains the long undecanoic acid ester. Its half-life is approximately 90 days, with stability being achieved in approximately 450 days. Due to the long-acting nature of this compound, a loading dose is recommended at six weeks.

Nebido is a form of testosterone called testosterone undecanoate. It is quite different from most other testosterone as it is released much more slowly into the system and is a much longer lasting ester. The recommended prescription for each injection interval is 10 - 14 weeks, with the average being around every 12 weeks, or 3 months.

NAKASISIGURO GAMOT AY LAGING BAGO

Sustanon - midway between injections (but levels may fluctuate - one level to check normal levels may suffice) Nebido - a 'trough' level prior to next injection is preferable (a 'peak' level can be done mid-way between injections but is less useful when adjusting frequency) Oral caps - any time But 100mg/wk of Cypionate didn't do much. But Cypionate at 200mg/wk is almost as good as 200mg/wk of Sustanon. So Sustanon works at a lower

dose. I have also used generic Nebido before, and the sex drive increase wasn't too good, not as good as Sustanon or Cypionate.

A viewer has been offered free Nebido on the NHS and wonders if it's worth switching to so that he doesn't have to pay privately for the Sustanon he is on. go now
