2. (X) The answer for [illegible] is [illegible]

CALCULUS II

FIRST PARTIAL

QUIZ 1A

65

Name: Fernando Jair Baleza Mendez **ID#:** A01570174 **Date:** 01/17/18

Answer the following problems with complete procedure.

1. Find the **approximate** value of $(3.04)^3$ (20 pts)

-15

$\Delta x = .04$

$f(x) = x^3$

$f'(x) = 3x^2$

$x_1 = 3$

$x_2 = 3.04$

$dy = 3(3)^2 + (3)(.04) \simeq 27.12$

Calculator $\simeq 28.09$

$f(x + \Delta x) = f(x) + f'(x)dx$

2. Given the equation $f(x) = x^2 - 2x + 3$ find the line tangent to the curve at $x = a = 0$. (20 pts)

-5

$f(0) = 0^2 - 2(0) + 3 = 3$

$x = 0$

$y = 3$

$f'(x) = 2x - 2 = m = -2$ ← evaluate. $x = 0$?

value? $= -2$

$y - 3 = (2x - 2)(x - 0)$

$y - 3 = 2x^2 - 2x$

$y = 2x^2 - 2x + 3$

Not a straight line?

3. The edge of a cube was found to be 20 cm. with a possible error in measurement of 0.1cm. Estimate the maximum possible error in computing the volume of the cube (20 pts)

-15

$\Delta x = .1$ cm

$x_1 = 20$

$x_2 = 20.1$

$V = 20.05^3 \simeq 8060.13$

$dV = 3x^2 * \Delta x$

$dV = 3(20.05)^2 * .1 \simeq 120.60$

$V = 8060.13 \pm 120.60$ cm3

determine if the follow... $\int(\sin x + \cos x)$ ... $\int \sin(3x)\,dx$ is $-2\cos(3x)+C$

4. A can is going to be modified in such a way that its height will change from 14cms to 14.8 cm but the diameter of the base will remain as 9cm.

a) Find the change in the volume of the can (20 pts)

$x_1 = 14$, $x_2 = 14.8$ $\rightarrow \Delta x = .8$

$V_1 = \pi(4.5)^2(14) = 890.64\ cm^3$

$V_2 = \pi(4.5)^2(14.8) = 941.53\ cm^3$

$\Delta V = 50.89\ cm^3$

b) Find the approximate change in the volume of the can (20 pts)

$dy = f'(x)\,\Delta x$ $\rightarrow$ $dy = \pi(4.5)^2(.8) \approx 50.8938\ cm^3 = dy$

$f'(x) = \pi r^2$

Find the approximate value of $(3.04)^3$

$\Delta x = .04$

$f(x) = x^3$

$f'(x) = 3x^2$

$x_1 = 3$

$x_2 = 3.04$

$$f(x + \Delta x) \approx f(x) + f'(x)\Delta x$$

$$= 3^3 + (3(3)^2(.04)$$

$$= 27 + 1.08$$

$$= \boxed{28.08}$$

Given the equation $f(x) = x^2 - 2x + 3$ find the line tangent to the curve at $x = a = 0$

$x = 0 \quad f(0) = 0^2 - 2(0) + 3 = 3$

$y = 3$

$f'(x) = 2x - 2$

$f'(0) = 2(0) - 2$

$f'(0) = -2 = m$

$y - 3 = -2(x - 0)$

$\boxed{y = -2x + 3}$

The edge of a cube was found to be 20 cm with a possible error in measurement of .1 cm. Estimate the maximum possible error in computing the volume of the cube

$V = x^3 \qquad x = 20 \pm .1 \qquad x_1 = 20 \quad \Delta x = .1$

$\frac{dV}{dx} = 3x^2$

$\boxed{V \pm dV = 8{,}000 \pm 120 \text{ cm}^3}$

$dV = 3(20^2)(.1)$

$dV = 120$
