Saizen is a sterile, non pyrogenic, white, lyophilized powder supplied in packages containing: 1 vial of 5 mg Saizen and 1 vial of Bacteriostatic Water for Injection, USP (0.9% Benzyl Alcohol) NDC 44087-1005-2. 1 vial of 8.8 mg Saizen and 1 vial of Bacteriostatic Water for Injection, USP (0.9% Benzyl Alcohol) NDC 44087-1088-1 [explanation](#)

Saizen should not be used in children after the growth plates have closed, or in children and adults with any of these medical conditions: a critical illness, serious injury, severe breathing problems, Prader-Willi syndrome who are severely overweight, eye problems caused by high blood sugar, or an allergy to the drug or diluent.

US Pricing: 5mg cartridges cost around \$2,600. easypod® Description: The easypod® delivery system for HGH injections is electronic and fully automated, providing an interactive experience for users and their healthcare providers by sending data in real-time between patients and doctors. It is designed for use with Saizen® cartridges.

Saizen is manufactured by EMD Serono, using recombinant DNA technology with a pharmacokinetic profile identical structure to natural growth hormone. It comes with a reconstitution device, white powder and solvent solution in 5mg or 8.8 mg vials. These vials must be stored at room temperatures of 15-30°C. The duration of the increase in growth hormone levels may play a role in determining the magnitude of the effects. A relative saturation of the effects of Saizen at high doses is probable. This is not the case for glycaemia and urinary C-peptide excretion, which are significantly elevated after high doses (20 mg).
