Re: Test 400 with anadrol cycle. ok dude woow lets slow down after ur var cycle take atleast 7 weeks off let your liver heal and repair then you can jump on a cycle,anadrol is very liver toxic and u dont need your liver shutting down on you and only 4 weeks of test is a waste man,,do it right.. The downside of being better than everyone else. Test 400 Deca Anadrol Cycle - Deca Durabolin Injection Manufacturers. Re: Test 400 with anadrol cycle. ok dude woow lets slow down after ur var cycle take atleast 7 weeks off let your liver heal and repair then you can jump on a cycle,anadrol is very liver toxic and u dont need your liver shutting down on you and only 4 weeks of test is a.

- As for deca,,, if u bothered to read 3rd line, deca is at 400 while test is at 600 after frontloading - Did anadrol before at 50/60 worked good but developed tolerance on subsequent cycle. - If u know anything about pharmacology, you would know that the therapeutic range is dependent on the therapeutic index of any particular drug.

So after much deliberation I decided to keep the cycle as is. Several friends of mine strongly recommended that I run the Deca at 500mg/week and I will have Caber on hand just in case. Just pinned the Test E/Deca, will pin the Androl/TNE tomorro morn about 1 1/2 hr before my workout. [extra resources](#)

2. Anadrol and Deca Durabolin Cycle. Deca durabolin is an effective injectable steroid that users can stack with anadrol, increasing muscle hypertrophy and strength.. Deca durabolin is not a toxic steroid like anadrol, thus side effects won't be a lot more severe than running anadrol by itself. First cycle was dbol 30mg 3-4 week and test 300.. had alot of gyno flares with dbol so had to stop it at mid week 2.. Can i get any advice on ais for this next cycle 300 test 1-16 300 deca 1-12 Anadrol 50mg 1-4 Pct 18-22 nova colmid Any advice at all would be great

You can do test prop for 40 days as you have originally planned and drop the anadrol dosage so you can use it for 40 days as well instead of 25. On a side note, combining anadrol with deca isn't a good idea at all. You should better do anadrol/primo or EQ or deca/ or primo with d-bol with test being the base of your cycle of course. First cycle of test 400 for 16 weeks Second test 400 and dbol same 16 weeks (dbol 5 weeks) Third test cyphonate 600 mg ew and mast . 5 month blast Fourth cycle same as second but used anadrol And I've caused on test 400 at 800 mg ew for the past 12 weeks I guess my fourth cycle really hasn't ever ended lol. Now I'm starting this cycle Wednesday.

2147485884. Test 1 gram a week Deca 1600mgs a week Anadrol 150mg for first 4 weeks. With 4 weeks left in the cycle add T-bol 100mg a day. 5iu of human grade hgh 5 days per week used with 100mcg of T4. Toss in slin if you know how to party. Eat like a horse and get your sleep, you will become a beast. [get more info](#)
