Here's the thing, I'm buying 1000 IU worth of HGH (Kigtropin) and it will come with ether Dianabol or Anavar, 2 bottles of either one I choose at 50 mg a pill (100 pills per bottle, 200 pills total for 2 bottles). All for \$900 (Holiday special thing). I just read about both drugs, both are steroids. Le Dianabol est largement plus hépatotoxique par rapport à l'Anavar, dont les risques ne sont valables qu'en cas de consommation excessive. Ce caractère peut entraîner des maladies plus ou moins graves comme l'insuffisance hépatique ou encore diverses lésions. #heck #dailyfood #bodybuilding #newersurrender #eatclean #gymmotivation #biceps #photooftheday #anabolicstate #anabolics #trt #dontgiveup #riseup #beast #beyourself #shouders #silownia #polishmuscle #polishboy #power #training #healthylifestyle Un autre cure car je vais recevoir très bientot mon anavar et mon diana. Tbol is Dbol without the bloat, I think the gains go as fast as the come, I gain strength but not hardness. Anavar I gain a bit of strength, lots of hardness and i keep more of my gains. This is my experience with the 2

What is Anavar? Anavar, also commonly known as Oxandrolone, is one of the first choices of users during slimming, thanks to its ability to prevent catabolism, while the user is following a low-calorie diet. Sounds like Tbol might make pretty good sense for me. I was thinking dbol or drol, but I am thinking going a milder option is a good way to go. I think not having any E2 conversion is a pretty nice feature, and the super low androgen properties would be really nice. I think with test it could be really nice, and not a hard to manage cycle. #whitebloodcells #epithelialbarrier #macrophage #antibodies

I liked both paired with Test. I wouldn't use either by itself. Oral only cycles suck! I'm not just saying that because it's the thing to say. So many people say it because its true. If you want use only peals, try clenbuterol, t3, or ephedrine. #anabolics#anabolic#muscle#muscles#bigarms#massgains#fitness#fitgirl#bodybuilding#bodybuildingmotivation#b

It is a synthetic androgen and anabolic steroid, whose strong anabolic effects (320-630 rating) have made it a popular performance enhancer for bodybuilders looking to improve their physique, stamina and performance.
