***EXERCISES [MAA 1.4]***

***GEOMETRIC SEQUENCES***

*Compiled by Christos Nikolaidis*

**O.  Practice questions**

**1.**  [Maximum mark: 8]      ***[with GDC]***

Consider the geometric sequence                   $10, 20, 40, 80, \ldots$

(a)  Write down the first term $u_1$ and the common ratio $r$ .          [1]

(b)  Find the 10th term of the sequence.          [2]

(c)  Find the sum of the first 10 terms.          [2]

(d)  Express the general term $u_n$ in terms of $n$ .          [1]

(e)  **Hence** find the value of $n$ given that $u_n = 20480$ .          [2]

**2.** [Maximum mark: 11]   *[with GDC]*

Consider the geometric sequence          $10, 5, 2.5, 1.25, \ldots$

(a)  Write down the first term $u_1$ and the common ratio $r$ .          [1]

(b)  Find the 10$^{\text{th}}$ term of the sequence.          [2]

(c)  Find the sum of the first 10 terms.          [2]

(d)  Express the general term $u_n$ in terms of $n$ .          [1]

(e)  **Hence** find the value of $n$ given that $u_n = 0.3125$          [2]

(f)  Explain why the sum of the infinite series exists (i.e. the series converges) and find its value.          [3]

**3.**    [Maximum mark: 10]    *[with GDC]*

The first term of a geometric sequence is 5 while the fourth term is 40.

(a)    Find the common ratio $r$.                                                                    [2]

(b)    Find the fifth term of the sequence.                                                  [2]

(c)    Find the sum of the first 10 terms.                                                    [2]

(d)    Find the smallest value of $n$ given that the $n$-th term exceeds 1000.    [2]

(e)    Find the first term that exceeds 1000.                                             [1]

(f)    Explain why the sum of the infinite series does not exist (i.e. the series diverges).    [1]

**5.** [Maximum mark: 10]    *[without GDC]*

Let   $k$ ,  $2k$ ,  $k + 60$   be consecutive terms of a sequence.

(a)   (i)  Find the value of $k$  if the sequence is arithmetic.

      (ii) Write down the three terms of the sequence and state the common difference.   [5]

(b)   (i)  Find the value of $k$  if the sequence is geometric.

      (ii) Write down the three terms of the sequence and state the common ratio.          [5]

## A. Exam style questions (SHORT)

**9.** [Maximum mark: 5]    *[without GDC]*

Consider the infinite geometric sequence $3, 3(0.9), 3(0.9)^2, 3(0.9)^3, \ldots$

    (a)   Write down the 10th term of the sequence. Do not simplify your answer.    [1]

    (b)   Find the sum of the infinite series.    [4]

.......................................................................................................................

**10.** [Maximum mark: 6]    *[with / without GDC]*

Consider the infinite geometric sequence $25, 5, 1, 0.2, \ldots$

    (a)   Find the common ratio.    [1]

    (b)   Find  (i)  the 10th term;   (ii)  an expression for the $n^{th}$ term.    [3]

    (c)   Find the sum of the infinite series.    [2]

**11.** [Maximum mark: 6]    *[with GDC]*

Consider the infinite geometric series $405 + 270 + 180 + ...$

(a)  For this series, find the common ratio, giving your answer as a fraction in its

simplest form.                                                              [2]

(b)  Find the fifteenth term of this series.                                     [2]

(c)  Find the **exact** value of the sum of the infinite series.                 [2]

**12.** [Maximum mark: 6]    *[with GDC]*

The first four terms of a sequence are 18, 54, 162, 486.

(a)  Use all four terms to show that this is a geometric sequence.              [2]

(b)  (i)   Find an expression for the $n^{th}$ term of this geometric sequence.

(ii)  If the $n^{th}$ term of the sequence is 1062 882, find the value of $n$.  [4]

**20.** [Maximum mark: 4]     *[without GDC]*

The $n^{\text{th}}$ term, $u_n$, of a geometric sequence is given by $u_n = 3(4)^{n+1}$, $n \in \mathbb{Z}^+$.

(a)    Find the first two terms and the common ratio $r$.                                      [2]

(b)    Hence, or otherwise, find $S_n$, the sum of the first $n$ terms of this sequence.     [2]

**21\*.** [Maximum mark: 6]     *[with GDC]*

A geometric sequence has a first term of $2$ and a common ratio of $1.05$.

Find the value of the smallest term that is greater than $500$.

**22.** [Maximum mark: 5]     *[with GDC]*

Let $u_n = 3 \times 2^n$.

(a)   Express $\sum_{n=1}^{3} u_n$ as a sum of three terms and find the result.     [3]

(b)   Find $\sum_{n=1}^{12} u_n$.     [2]

**23.** [Maximum mark: 4]     *[with GDC]*

The tuition fees for the first three years of high school are given in the table below.

| Year | Tuition fees (in dollars) |
|------|---------------------------|
| 1 | 2000 |
| 2 | 2500 |
| 3 | 3125 |

These tuition fees form a geometric sequence.

(a)   Find the common ratio, $r$, for this sequence.     [2]

(b)   If fees continue to rise at the same rate, calculate (to the nearest dollar) the total
cost of tuition fees for the first six years of high school.     [2]

**24.** [Maximum mark: 6]     *[with GDC]*

The annual fees paid to a school for the school years 2000, 2001 and 2002 increase as a geometric progression. The table below shows the fee structure.

| Year | Fees (USD) |
|------|------------|
| 2000 | 8000.00 |
| 2001 | 8320.00 |
| 2002 | 8652.80 |

(a)    Calculate the common ratio for the increasing sequence of fees.                    [2]

**In parts (b) and (c) give your answer correct to 2 decimal places.**

The fees continue to increase in the same ratio.

(b)    Find the fees paid for 2006.                                                        [2]

A student attends the school for eight years, starting in 2000.

(c)    Find the **total** fees paid for these eight years.                                 [2]

**25.** [Maximum mark: 10]    *[with GDC]*

Ann and John go to a swimming pool.

They both swim the first length of the pool in 2 minutes.

The time John takes to swim a length is 6 seconds more than he took to swim the previous length.

The time Ann takes to swim a length is 1.05 times that she took to swim the previous length.

(a)  (i)    Find the time John takes to swim the third length.

(ii)   Show that Ann takes 2.205 minutes to swim the third length.         [3]

(b)  Find the time taken for Ann to swim a total of 10 lengths of the pool.         [3]

(c)  Find the time taken for John to swim a total of 10 lengths of the pool.         [4]

**47.**   [Maximum mark: 8]      *[with GDC]*

The first term of a geometric sequence is $500$ while the fourth term is $62.5$. Find

(a)   Find the common ratio $r$.                                                                                   [2]

(b)   Find the fifth term.                                                                                            [1]

(c)   Find the sum of the first **ten** terms correct to 3 decimal places.

(d)   Find the smallest value of $n$ given that the $n$-th term is less than $10$.               [2]

(e)   Find the first term which is less than $10$.                                                          [1]

**48.** [Maximum mark: 11]    *[with GDC]*

Portable telephones are first sold in the country *Cellmania* in 1990. During 1990, the number of units sold is 160. In 1991, the number of units sold is 240 and in 1992, the number of units sold is 360.

In 1993 it was noticed that the annual sales formed a geometric sequence with first term 160, the 2nd and 3rd terms being 240 and 360 respectively.

(a)    What is the common ratio of this sequence? [1]

Assume that this trend in sales continues.

(b)    How many units will be sold during 2002? [3]

(c)    In what year does the number of units sold first exceed 5000? [4]

Between 1990 and 1992, the total number of units sold is 760.

(d)    What is the total number of units sold between 1990 and 2002? [2]

During this period, the total population of *Cellmania* remains approximately 80 000.

(e)    Use this information to suggest a reason why the geometric growth in sales would not continue. [1]

**49.** [Maximum mark: 11]    *[with GDC]*

The diagrams below show the first four squares in a sequence of squares which are subdivided in half. The area of the shaded square A is $\frac{1}{4}$.
Diagram 1
Diagram 2
Diagram 3
Diagram 4

(a)  (i)   Find the area of square B and of square C.

     (ii)  Show that the areas of squares A, B and C are in geometric progression.

     (iii) Write down the common ratio of the progression.                               [5]

(b)  (i)   Find the **total** area shaded in diagram 2.

     (ii)  Find the **total** area shaded in the 8th diagram (correct to 6 sf.)          [4]

(c)  The dividing and shading process illustrated is continued indefinitely.

     Find the total area shaded.                                                          [2]

A National Lottery is offering prizes in a new competition. The winner may choose one of the following.

**Option one:**   $1000 each week for 10 weeks.

**Option two:**   $250 in the first week, $450 in the second week, $650 in the third week, increasing by $200 each week for a total of 10 weeks.

**Option three:**  $10 in the first week, $20 in the second week, $40 in the third week continuing to double for a total of 10 weeks.

(a)   Calculate the amount you receive in the tenth week, if you select

   (i)    **option two**;

   (ii)   **option three**.                                                                                      [6]

(b)   What is the total amount you receive if you select **option two**?                [2]

(c)   Which option has the greatest total value? Justify your answer by showing all appropriate calculations.                                                                       [4]

**55\*.** [Maximum mark: 13]    *[with GDC]*

An arithmetic sequence is defined as  $u_n = 135 + 7n, \quad n = 1, 2, 3, \ldots$

(a)    Calculate $u_1$, the first term in the sequence.    [2]

(b)    Show that the common difference is 7.    [2]

$S_n$  is the sum of the first $n$ terms of the sequence.

(c)    Find an expression for $S_n$. Give your answer in the form $S_n = An^2 + Bn$,
       where $A$ and $B$ are constants.    [3]

The first term, $v_1$, of a geometric sequence is $20$ and its fourth term $v_4$ is $67.5$.

(d)    Show that the common ratio, $r$, of the geometric sequence is $1.5$.    [2]

$T_n$  is the sum of the first $n$ terms of the geometric sequence.

(e)    Calculate $T_7$, the sum of the first seven terms of the geometric sequence.    [2]

(f)    Use your GSC to find the smallest value of $n$ for which  $T_n > S_n$.    [2]
