Anabolic steroid abuse in athletes has been associated with a wide range of adverse conditions, including hypogonadism, testicular atrophy, impaired spermatogenesis, gynaecomastia, and psychiatric disturbance. But what effect does steroid abuse have on the cardiovascular system? <http://dx.doi.org/10.1136/ht.2003.025783> Anabolic Steroids, Growth Hormone, and Hypertrophy of the Heart March 12, 2004 By Willem Koert The debate on the effect of anabolic substances on the structure of the heart reached another phase, since Finnish scientists studied twenty local bodybuilders who had just finished their cycles. Steroids don't damage the heart, the researchers found. Chronic administration of anabolic androgenic steroids (AAS) in adult rats results in cardiac hypertrophy and increased susceptibility to myocardial ischemia/reperfusion (IR) injury. Molecular analyses demonstrated that hyperactivation of

type 1 angiotensin II (AT1) receptor mediates cardiac hypertr ... Anabolic steroid use amongst bodybuilders can induce significant left ventricular hypertrophy. The pattern and severity of remodelling can mimic hypertrophic cardiomyopathy.
