As a schedule III drug, testosterone enanthate is available by prescription only.

How many times a week should I inject testosterone enanthate?

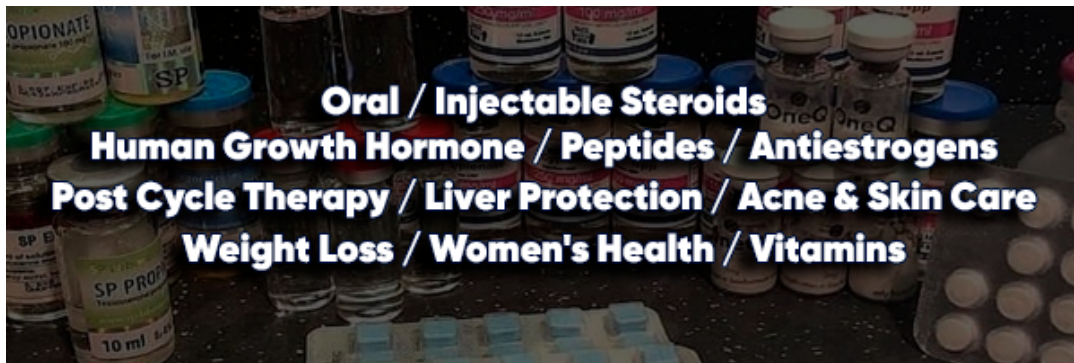

This medication is given by injection into the buttock muscle as directed by your doctor, usually every 1 to 4 weeks. Do not inject this medication into a vein. Dosage is based on your medical condition, testosterone blood levels, and response to treatment.

Is 1 ml of enanthate a week enough?

1 ml per week is 200 mg per week of testosterone. This is a replacement dose not shown to increase lean mass significantly in the short term. However, using higher doses may also increase red blood cell production and blood viscosity, so your doctor needs to monitor your hematocrit blood levels.

Where do you store testosterone enanthate?

STORAGE. Testosterone Enanthate Injection should be stored at 20° to 25°C (68° to 77°F) [See USP Controlled Room Temperature]. Warming and rotating the vial between the palms of the hands will redissolve any crystals that may have formed during storage at low temperatures.
