

Name Alexandra Iliar

I.D. AD1570159

good!

**I. Multiple choice. Choose the letter of the right answer (10 points).**

1. Choose the sentence that best describes the approximate area below the graph of  $f(x)$ :

- (a) Approximation of the area on the interval  $[0,4]$  using 4 partitions with left-hand calculations.
- b) Approximation of the area on the interval  $[1,5]$  using 4 partitions with right-hand calculations. ✓
- (c) Approximation of the area on the interval  $[0,4]$  using 4 partitions with right-hand calculations.
- d) Approximation of the area on the interval  $[1,5]$  using 4 partitions with left-hand calculations. ✗

-10

**II. Evaluate the integral using the following values. SHOW THE STEPS OF YOUR PROCEDURE. (5 points each)**

$\int_2^4 x dx = 7$

$\int_2^4 x^3 dx = 24$

$\int_2^4 dx = 4$

- a.  $\int_2^4 (2x^3 + 5x + 3) dx = \underline{95}$
- b.  $\int_2^4 20 dx = \underline{80}$
- c.  $\int_5^5 x^3 dx = \underline{0}$
- d.  $\int_4^2 x dx = \underline{-7}$

a.  $2 \int_2^4 x^3 dx + 5 \int_2^4 x dx + 3 \int_2^4 dx$   
 $= (2)(24) + (5)(7) + (3)(4)$   
 $= 48 + 35 + 12 = \underline{95}$

b.  $20 \int_2^4 dx = (20)(4) = \underline{80}$

c.  $\int_5^5 x^3 dx = \underline{0}$

d.  $\int_2^4 x dx = -(7) = \underline{-7}$

**IV. Procedure. Solve the following problem showing your entire procedure.**

1) Approximate the area of a plane regions using left hand, right hand and middle points approximations.

$f(x) = 9 - x^2$  on  $[-3, 0]$  4 rectangles (20 points)

$a = \frac{0+3}{4}$   
 $\Delta x = \frac{3}{4}$   
 $\Delta x = 0.75$

left:  $14.330^2$   
 right:  $21.080^2$

Area (Left hand) =  $\underline{14.330^2}$   
 Area (Right hand) =  $\underline{21.080^2}$

- $(0.75) f(-3) = 0$
- $(0.75) f(-2.25) = 2.95$
- $(0.75) f(-1.5) = 5.06$
- $(0.75) f(-0.75) = 6.32$
- $(0.75) f(0) = 6.75$

2) Give the graph (remember to shade the corresponding area) whose area is given by the following definite integral. Then use a geometric formula to evaluate the integral (by finding the area) (15 points each)

$$\int_0^2 (4-x) dx$$

Graph

Procedure by geometric formulas

$$A_1 = (2)(2)$$

$$A_1 = 4$$

$$A_2 = \frac{(2)(2)}{2}$$

$$A_2 = 2$$

$$A_1 + A_2 = 4 + 2$$

$$\underline{\underline{A = 6U^2}}$$

x	4
-2	6
-1	5
0	4
1	3
2	2
3	1

3)  $\int_0^8 \frac{x}{4} dx$

Graph

Procedure by geometric formulas

$$A_1 = \frac{(8)(2)}{2}$$

$$A_1 = 8$$

$$\underline{\underline{A = 8U^2}}$$

x	4
-2	-0.5
-1	-0.25
0	0
1	0.25
2	0.5
3	0.75
4	1
5	1.25
6	1.5
7	1.75
8	2

3) Based on the following graph evaluate the given definite integrals (5 points each):

1.  $\int_0^5 f(x) dx$

$$\underline{\underline{2500U^2}} \quad \frac{(5)(100)}{2} = 2500$$

2.  $\int_5^{20} f(x) dx$

$$\underline{\underline{15000U^2}} \quad (15)(100) = 15000$$

3.  $\int_5^{15} f(x) dx$

$$\underline{\underline{7250U^2}} \quad \frac{1500}{2} + 5000 = 7250$$

4.  $\int_0^{60} f(x) dx$

$$\underline{\underline{85000U^2}} \quad \frac{7250}{2} + 10000 + 2500 = 85000$$

$$\frac{(15)(100)}{2} = 7500$$

$$\frac{(5)(100)}{2} = 2500$$

$$\frac{(15)(200)}{2} = 15000$$

$$\frac{(10)(200)}{2} = 10000$$
