Primo-100 is a pharmaceutical-grade Methenolone Enanthate (Primo) manufactured by Global Anabolic. This product provides more or less the same effects as Winstrol except that it is not toxic to the liver because it is not AA17. It has the advantage that even taken alone, it can bring muscle gain associated with a carburation fat as with Winstrol. Molecule : Methenolone Enanthate Concentration : 100mg/ml Volume : 10 ml Recommended dosage : 100/400mg/week. This product provides more or less the same effects as Winstrol except that it is not toxic to the liver. The Methenolone molecule of Primobolan has the advantage that can even be taken alone, it can cause muscle mass gain associated ... For anabolics, this could include specific cardiac investigations (ex. Echocardiogram) and routine bloodwork related to vascular risk and liver function.

Primobolan Depot is the injectable version of the steroid methenolone and, although it produces a weaker effect than Deca-Durabolin it is a very good basic steroid whose effects are predominantly anabolic. The fact that an enanthate ester is added to this steroid enables a slow and gradual release from the injection site. At the 400 mg/week usage level, post-cycle therapy (PCT) may be started only 5 days after the last injection, whereas at a higher level of usage such as 1000 mg/week, at least 10 days will be needed until recovery is likely to become possible. Primobolan Depot Does Not Convert to Estrogen or DHT

💎 Fitness is like a marriage you can't cheat on it and expect it to work. 💎 💎 Never give up greatness take time. 💎 💎 Your success is determined by what you are willing to sacrifice for it. 💎 💎 Result happen over time, not overnight. [right here](#)

Primobolan Depot - Methenolone Enanthate. by Jan Nichols · January 18, ... (50 mg per week) or Oxandrolone (7.510mg daily) and receive a greatly enhanced anabolic effect. Remember though, androgenic activity can be a concern and should be watched, particularly when more than one anabolic is used at a time. If stacking, it would be best to ...

Primobolan Depot (Methenolone Enanthate) Methenolone is an anabolic androgenic steroid that was first released in 1962 by Squibb under the trade name Nibal (oral) and Nibal Depot (injectable). This was a very short-lived product on the U.S. market and by the mid-1960's the German pharmaceutical powerhouse Schering would own all rights to the ... #bodybuilding #crossfit #boxing #powerlifting #weightgain #weightloss #fitnessmotivation #fitness #gym #bodybuilding #fitnessclassic2019 #fitnessmodel #gymlife #bodytransformation #newpost #newgym #powerlifting #boxing #boxer For males - from 400 to 1000 mg. For females from 200 to 400 mg (often dosing even 100 mg per week is enough for a good increase in muscle mass and strength indicators). It should be remembered that the action of Methenolone Enanthate in the body takes about six to seven days.

And 1000 mgs can literally transform your body. More than 1000 mgs however doesn't seem to have more of an effect. There are a lot of other variables than can come into play here and alter your numbers but even if we simply look at total testosterone, it can be a very simple way to see how you metabolize exogenous testosterone as well as if your exogenous testosterone is of high quality and dosed properly.
