Notes:

1. The solid line is the least squares best fit indicating (a possible) dependence of the Jury score on the Popular score.
2. The dashed lines demarcate Popular scores within one standard deviation of the least squares line (e.g. the scores of **Australia** and **France** are in this category); only eight countries are outside this category (the Popular scores for **Norway**, **Russia**, **Iceland**, **Italy**, **Netherlands** & **Switzerland** were unexpectedly high, while those for the **Czech Republic** & the **North Macedonia** were unexpectedly low).
3. The small dashed lines indicate that all Popular scores were within two standard deviations of the expected score (based on that awarded by the Jury).
