Dianabol (Methandrostenolone), also known as dbol, is chemically very similar to testosterone. It is an oral steroid that was developed specifically for performance enhancement. Usually, dianabol is most commonly ran as a kick start (the first 4-6 weeks) to a cycle but some choose to run it as a standalone. A beginner cycle using Dianabol will rely on this steroid for muscle and strength gains and also include testosterone compound to provide the much needed testosterone support and to keep testosterone levels on track. This is a less discussed topic and something that is really crucial. I wanted to share my experience on How I dealt with it and with the help of my therapist @lifemattersbyjoy I could write a few things that helped me over come this.

Some of the most common Dianabol and Test cycle for most people looks like: Testosterone Enanthate

(or any other ester, including Sustanon) at 500 mg per week for a total of 12-14 weeks. Dianabol 50 mg a day for 4-6 weeks. Aromasin approximately 10-15 mg a day (depending on our estrogen levels) or any other AI. Together dianabol and testosterone are the most tried and tested anabolic-androgenic steroid cycles for building muscle and strength. Many bodybuilders love to stack'em in one cycle because they deliver explosive gains. In this article we provide answers to the most common questions about this cycle and more.

Dianabol only cycles would be around 50-100mg/d. Drol only cycles would be around 100-200mg/d. Winstrol would be best stacked with either Dianabol or Drol at a dose of about 50-100mg/d. Var only cycles would be around 60-120mg/d but wouldn't be good for much besides a bit of a boost in breaking through plateaus.

Update #1- Day 1 on the cycle. I took 30 mg of Dbol spread through the day, and my first shot of 250 mg of test cyp this morning. I have never been so hungry in my life, and it is definitely not a placebo effect. I know that it can't possibly be the test kicking in, but the dianabol has definitely made me hungrier than ever before.

Many of us do not become "great" and only remain good because we just do enough work to live by or at the best enough work and a bit more. To become the mountain eagle you have to work beyond normal standards. Stop victimizing yourself. Taking control and just putting your head down and doing unbelievable amounts of work. You don't use obstacles as excuses but find ways to overcome them in any way possible whatever the cost. This is how you achieve greatness. This is how you become the mountain eagle. You outwork them all. That's the secret.

An oral only cycle of 10-20mgs of Dianabol (per day) with 10-20mgs of Turinabol (per day). Yes, you'll be restricted to a 4-6 week cycle, but this combo can produce similar Dianabol steroid results as those listed above. #FermentYourselfToGreatNess #FermentedAminiAcid #Fish #Salmon #FAA #LuckyTrichome #WorkHardEatGood #PlantsLikeFish #GrowHardOrGoHome #InMyOwnLane #Medicine Arnold Schwarzenegger's Steroid Cycle Based on the information provided, we can assume that Arnold Schwarzenegger's steroid cycle consisted of 15-20 milligrams of Dianabol per day and 100 milligrams of Primobolan per week.
