ANASTROZOLE - ORAL (an-AS-troe-zole) **COMMON BRAND NAME(S):** Arimidex. **USES:** Anastrozole is used to treat breast cancer in women after menopause. Some breast cancers are made to grow faster by a natural hormone called estrogen. Anastrozole decreases the amount of estrogen the body makes and helps to slow or reverse the growth of these breast cancers. Similarly, in the combined analysis of the ABCSG trial 8 and the ARNO 95 trials, after a median follow-up of 36 months, the odds of bone fractures in patients taking anastrozole were significantly increased (2% for anastrozole vs. 1% for tamoxifen, OR 2.14, 95% CI 1.14—4.17, P=0.015).

Based upon artificial insemination and also in vivo results, it is unlikely that co-administration of Arimidex 1 mg will certainly affect various other drugs as an outcome of inhibition of cytochrome P450 [see Clinical Pharmacology (12). Do not take extra medication to compose the missed out on dosage.

Lorem ipsum dolor. In postmenopausal women, oestrogens are generally obtained from the activity of the aromatase enzyme, which converts adrenal androgens (mainly androstenedione and testosterone) to estrone as well as estradiol. Based on artificial insemination as well as in vivo results, it is not likely that co-administration of Arimidex 1. [click over here](#)
