PAD affects not only how well you live but also how long you may live. You may find that you can't walk as far as long as you used to and that's frustrating but if you have PAD, you are also at greater risk for having a heart attack and stroke.

-GHD: Generally, a dose of 0.16 to 0.3 mg/kg body weight per week is recommended.-GHD: In pubertal patients, a weekly dosage of up to 0.7 mg/kg divided into daily doses may be used.-PWS: Generally, a dose of 0.16 to 0.24 mg/kg body weight per week is recommended.-Individualize dosage and administration schedule based on the growth response. "Before" terlihat bagian perut yang bergelambir dan selulit sehabis pasca melahirkan. Dengan 5x treatment, sudah mulai terlihat hasilnya. Bagian "After" perut yang bergelambir pun mulai terangkat serta mengencangkan. Substanța activă a medicamentului este somatotropina (hormon de creștere uman, ADN-recombinat). După reconstituire, fiecare mililitru de soluție injectabilă conține somatotropină 5,3 mg sau 12 mg, corespunzând cu somatotropină 16 UI respectiv, 36 UI (unități internaționale).
